Forest tourism, an untapped potential in northeastern Iran

A SAMANEE ABTOUBELI

A ecotourism developer and

becomes more popular around the world, the social
demand for attractive, quiet, safe, and natural-looking spaces for re-
creation rises as well.

This is where forests play a key role in attracting tourists and de-
veloping the region, tourism, and Iran, as a four-season country is
home to several pristine forested lands.

Different provinces across the country benefit from dense forests, their
magnificence, scenery, and the income they bring in, however, oak forests in North
Khorasan are still less known to potential travelers and holidaymakers.

With an area of 26,000 hectares, the forested land of the northeastern province, which is the only oak forest in the same side of the county, located around the village of Danalik, a tourist destination in Mashhad and Samalqan county, while the Atrak River, as the only destination in Maneh and Samalqan around the village of Daraksh, a tourist
destination in Maneh and Samalqan.

Khorasan are still less known to potential
travelers and holidaymakers.

U.S. role in West Asia has never been constructively: Indian professor

BY MOHAMMAD MAZHEIRI

A Indian academic assesses Wash-
hington has never played a “constructive” role in the West Asia region.

“The U.S. role in the Middle East (West Asia) has never been constructively,” Ashok Swain tells the Tehran Times.

Swain, professor of peace and conflict research at the Department of Peace and Conflict Research from Uppsala University, believes Washington has been missing his own interests in the region.

Swain says, “Washington has never been a constructive actor in the Middle East (West Asia)’s security and development, but for its own security and development, the professor notes.

While some observers argue that the U.S. will repair its bad reputation under the incoming Biden presidency, others say that the United States has created a haven in the region to underpin the increasingly close alliance between China, Russia, and Iran in order to counter China’s growing influence. The Indian professor says, “It will be not only difficult but in many cases impossible for the Biden administrations to bring back the mask of a fair adjudicator, which the USA had been wearing for decades.”

The following is the text of interview with Ashok Swain.

How do you assess the status of Chi-

na in global economy? How could China

achieve such a status?

The Chinese economy has become the main engine of global economic growth for the last three decades and it has already replaced the USA as the global economic leader. China’s economic position looks likely to be further strengthened by the Covid-19 crisis as it has come out much faster from it while the USA and Europe are still struggling with it.

Sustained and rare, honest goodwill by the U.S. is its only salvation now...

BY MARTIN LOVE

It would appear that the primary question

regarding whether the JCPOA will be resurrected and sanctions dropped on is whose terms this might happen, if ever.

The best hope is that in such a fashion the Islamic

Revolution administration, assuming it reaches the White House on January 20, apologizes in some way for a policy and a “mistaken” campaign against the Islamic Republic (perhaps ideally with apologies) and enforces the JCPOA as it was back in May 2015. And this seems to be exactly what the Islamic Republic is insisting on, which to my level-headed person makes the most sense.

On the other hand, the U.S. appears to be aiming for the terms of the deal to be totally extended, and at first glance this does not seem like something that could not be achieved in time.

In “time” means that an extension modification may be possible, but not right away. Maybe not for a year more because after all it was the U.S. that unabashedly threw the deal just as under Trump and other Neo-cons think they could revert into a number of other international accesses in fits of extreme arrogance and disrespect for other countries, in particular Iran.

Iran says misusing the lives of its plane victims for political gains

General Soleimani, an anti-terror hero amid a web of U.S.-Israeli intrigue

His tale is a hero's deeds. His tale is a never-ending battle against the evil forces of our time.

A man of his words

A short write-up on the senior Iranian commander described him as the "public face of Iran's response to U.S. President Donald Trump's threats."

Antiterrorist, national hero

"The three great cornerstones of the anti-terrorist world today are the officialdog Tags that the world has never seen before, and a kind of moral that is unbreakable," the Iran President's advisor said. Many foreigners find the country laughable for its current possessions. Security General Qassem Soleimani, the head of Iran's Quds Force, counterterrorism unit, and office of the Islamic Revolutionary Guard Corps (IRGC) operations. The head of Iran's Quds Force, General Qassem Soleimani, has been assassinated by the US in Iraq. The attack happened in the early hours of Friday, January 3, 2020, targeting Soleimani's convoy near Baghdad International Airport. The US defense "can be blamed on human error".

Iranians"ロンズに賜うものであると述べた。彼はまた、同じく、"All our nations and our groups have the right to repel any aggression..."と述べた。"The three great cornerstones of the anti-terrorist world today are the officialdog Tags that the world has never seen before, and a kind of moral that is unbreakable," the Iran President's advisor said. Many foreigners find the country laughable for its current possessions.

The US administration has long sought to limit Iran's access to the international banking system and has imposed a broad range of economic sanctions on the country. These sanctions have targeted Iran's oil exports, banking sector, and other key sectors of the economy. Iran has responded with its own countermeasures, including the development of its own currency, the rial.

**European plot: How to kill an agreement?**

The U.S. presidential election in November could play a crucial role in determining the fate of the Iran nuclear deal. A joint ministerial statement issued by the EU high representative for foreign affairs and security policy, Josep Borrell, and the UN nuclear watchdog, and more importantly the prospect of a U.S. return to the JCPOA such as preserving and fully implementing the deal, the European Union said was agreed on last week during the meeting of EU high representatives and US Secretary of State Mike Pompeo.

The foreign ministers of Iran, China, France, Germany, and the UK (E3) - took the responsibility of the JCPOA participants re-emphasized the commitments to preserve the agreement and strengthen it under the guidance of the 2015 Iran nuclear deal.

The statement also addressed the issue of the JCPOA participants re-emphasized the commitments to preserve the agreement and strengthen it under the guidance of the 2015 Iran nuclear deal. Iran, Russia agree on expansion of technical co-op in oil, gas sectors

TEHRAN – Iranian Oil Minister Bijan Namdar Zanganeh said that Iran and Russia agreed to boost technical research in oil and gas sectors, IRNA reported.

The minister made the remarks after his meeting with the Russian Deputy Prime Minister Alexander Novak and Energy Minister Nikolai Shulginov in Moscow on Monday.

Zanganeh said that Iran and Russia agreed to expand their technical cooperation in the oil and gas sectors.

Supporting the industrial units is being pursued actually, but there are some weaknesses in this due which should be addressed and worked on.

One of the main problems is the weak support of the private sector. A well-known program has been announced by the IRISL's Board of Directors, but in the current situation, the private sector has not been provided with the necessary support.

In conclusion, it is important to have a major role in the industrial units. The private sector should be mobilized and supported in these areas.

The problems related to land ownership, the EAEU, and other policies subject to the program should be addressed.

In any case, they will have a negative impact on the economy. The private sector should be prepared to face any change – either positive or negative – in the new era, and to do so requires the government's support.

Industrial units’ activities being developed to boost production

TEHRAN – Iran’s industrial units play a significant role in making the country self-reliant and independent through boosting production, which is a major strategy of Iran to combat the U.S. sanctions.

The strengthening domestic production to achieve self-reliance is the most important program that Iran is following up in its industry sector in a bid to modify the effects of the U.S. sanctions on its economy.

In this case, the current Iranian calendar year (began on March 20) has been named the year of “Burge in Producing” of all governmental bodies, as well as the private sector.

To achieve its mission in line with the materialization of this motto, the role of EAEU as a significant role in the realization of the mentioned goal, the Ministry of Industry, Mining and Trade has instated some developments and set up its main programs for supporting domestic production activities, the IRISL portal said on Monday.

The ministry’s seven main axes of the sustainable development of Iran’s economy are:

1- Development of indus- trial parks and supporting the units located in the private sector to make use of the major programs undertaken by the ministry.

2- Projected, prepared development of indus- trial parks and supporting the units located in the private sector to make use of the major programs undertaken by the ministry.

3- The program has already borne fruit, as reported by the latest data released by Indus- trial, Mining and Trade Ministry, during the first eight months of the current Iranian calen- daryear (March 20-November 20), 258,400 new industrial units were established, the ministry said.

The estimated investment for making these units was 1.8 million dollars, which was 59 percent increase compared to the same period in the past Iranian calendar year. The share of the private sector in the industrial units in the country increased 15 percent in the past Iranian calendar year.

TEHRAN – The Ministry of Industry, Mines and Agriculture’s Iran commodity association (IRISL) said that domestic industrial units have been completely contained in the dam reservoirs of the country, and no more water is being extracted from these areas.

Over 4.5 billion cubic meters of water has been contained in the dams of the country.

Some 87 percent of the mentioned figure has been stored in Kerman, Golestan, and Mazandaran provinces, the association said.

According to meteorological forecasts regarding the major floods in the western and southern basins of the country in the current Iranian calendar year, the country is prepared to contain over 75 million cubic meters of water has been contained in the dams of the country.

The problems related to land ownership, the EAEU, and other policies subject to the program should be addressed.

Due to the recent rainfalls across Iran, the flood fronts have been completely contained in the dam reservoirs and the empty volume of the dams of water supply in the current year (May 21, 2021) has reduced by 20 percent compared to the same period in the past year, which is the lowest and the most crucial period of the year.

This phenomenon has occurred in all 31 provinces of Iran, which is a great progress compared to the previous years.

Due to the recent rainfalls across Iran, the flood fronts have been completely contained in the dam reservoirs and the empty volume of the dams of water supply in the current year (May 21, 2021) has reduced by 20 percent compared to the same period in the past year, which is the lowest and the most crucial period of the year.

The problems related to land ownership, the EAEU, and other policies subject to the program should be addressed.

U.S. role in West Asia has never been constructive: Indian professor

“China continues to be the main engine of world economic growth for the last three decades and it has already replaced the USA as the global economic leader”

China’s rapid growth was possible due to a combination of various factors. A stable political system, educated workforce, a state with strong institutions that managed internal stability, and did not engage in conflict, the country joining the World Trade Organisation (WTO) in 2001, adopting trade liberalization policies, and receiving massive foreign investment in the domestic economy.

But the last three years have been the most tumultuous periods in modern China’s history. U.S.-China relations have been strained due to Trump’s impulsiveness or a new shift in the country’s foreign policy.

A. America lacked a coherent foreign policy in the last four years, because neither it was proactive, nor vision, and even plan. Trump has left it on the table about who he is and wants.

B. The U.S. has little to offer to its partners through an approach via-a-vis China resulting in relative decline of the last four years after Trump’s presidency, while he became much more active in the region.

C. China adopted an assertive and confident foreign policy, which has resulted in seriously deteriorating China-US relations in the past four years.

D. China has increased its economic power in the region, and the World Economic Forum (WEF) ranks China as the number one country in the Asia-Pacific region.

E. China has also increased its military power. Chinese media often compare China’s military power to its economy strength and it is going to be the world’s dominant power in the Asia-Pacific region.

F. The question of sanctions is in the broadest sense an American issue: U.S. policy of economic sanctions against Iran, Cuba, Sudan and other countries.

G. The U.S. has not increased its political power in the region and was outdone by China in the region.

H. And the U.S. has done nothing to earn this definition, description, characterization, on China-US relations.

I. The U.S. and the World Economic Forum, UN and Security Council, did the World Economic Forum, the USA in the Middle East (West Asia) to maintain the dominant position of the U.S. When China-US relations have been deteriorating, the U.S. has tried to mobilize countries against China under the influence of the U.S., China-US relations have been deteriorating, the U.S. has tried to mobilize countries against China under the influence of the U.S.

J. The U.S. has not increased its economic power in the region and the World Economic Forum (WEF) ranks China as the number one country in the Asia-Pacific region.

K. China’s success in navigating the complex web of regional politics, economics, and security challenges, shows its strategic acumen and ability to adapt to the changing geopolitical landscape.

L. China’s economic success is built on its ability to foster strong economic growth and development in the region. China’s policies, such as the Belt and Road Initiative, have enabled it to expand its influence and economic power in the region.

M. China’s success in navigating the complex web of regional politics, economics, and security challenges, shows its strategic acumen and ability to adapt to the changing geopolitical landscape.

N. China’s economic success is built on its ability to foster strong economic growth and development in the region. China’s policies, such as the Belt and Road Initiative, have enabled it to expand its influence and economic power in the region.

O. China’s success in navigating the complex web of regional politics, economics, and security challenges, shows its strategic acumen and ability to adapt to the changing geopolitical landscape.

P. China’s economic success is built on its ability to foster strong economic growth and development in the region. China’s policies, such as the Belt and Road Initiative, have enabled it to expand its influence and economic power in the region.

Q. China’s success in navigating the complex web of regional politics, economics, and security challenges, shows its strategic acumen and ability to adapt to the changing geopolitical landscape.

R. China’s economic success is built on its ability to foster strong economic growth and development in the region. China’s policies, such as the Belt and Road Initiative, have enabled it to expand its influence and economic power in the region.

S. China’s success in navigating the complex web of regional politics, economics, and security challenges, shows its strategic acumen and ability to adapt to the changing geopolitical landscape.

T. China’s economic success is built on its ability to foster strong economic growth and development in the region. China’s policies, such as the Belt and Road Initiative, have enabled it to expand its influence and economic power in the region.

U. China’s success in navigating the complex web of regional politics, economics, and security challenges, shows its strategic acumen and ability to adapt to the changing geopolitical landscape.

V. China’s economic success is built on its ability to foster strong economic growth and development in the region. China’s policies, such as the Belt and Road Initiative, have enabled it to expand its influence and economic power in the region.

W. China’s success in navigating the complex web of regional politics, economics, and security challenges, shows its strategic acumen and ability to adapt to the changing geopolitical landscape.

X. China’s economic success is built on its ability to foster strong economic growth and development in the region. China’s policies, such as the Belt and Road Initiative, have enabled it to expand its influence and economic power in the region.

Y. China’s success in navigating the complex web of regional politics, economics, and security challenges, shows its strategic acumen and ability to adapt to the changing geopolitical landscape.

Z. China’s economic success is built on its ability to foster strong economic growth and development in the region. China’s policies, such as the Belt and Road Initiative, have enabled it to expand its influence and economic power in the region.

This translates into a loss of $350 billion in export revenues from international tourism, more than 10 times the loss in 2006 under the impact of the global economic crisis.
Based on the current evidences, UNWTO expects international arrivals to decline by 70% to 75% for the whole of 2020. In this case, global tourism will still return to levels of 15 years ago, with 1 billion fewer arrivals and a loss of some $1 trillion in international tourism receipts.
This massive drop in tourism due to the pandemic could result in an economic loss of $3 trillion in world GDP.

However, the region benefits from its rich cultural heritage and is famous for its traditional handicrafts, which are especially popular in tourist destinations.

Forest tourism, an untapped potential in northeastern Iran

While though Khorasan province may not be the first
choice of regular travelers, its tourism is getting momentum.
Most foreign tourists who come by road, with the height of 41 km, has been involved in 10 main sites and hotels, cafes, and restaurants.

The city is known for its historical street and to prevent any destruction or distortion of the historic features of the area.

A large number of Afghan artists and cultural figures have organized an exhibition and call for attention to the issue of cultural heritage.

The Afghanistan Art Week was organized in collaboration
with the Endowment of Afghanistan on the theme of
"My Beloved, Where Are You?" to express sympathy with the Afghan people.

The event was held at the Kabul University, at students in their classrooms and flashing with security guards.

The object has been handed over to the UNESCO-registered Heritage Desk.

"At the discretion of Health Ministry, flights to UK destinations will be suspended

It has always been said that artificial intelligence is supportive and cost-saving. The use of the fields in which artificial intelligence can take a significant role is effective and improves people's quality of life. In some studies in the field of medicine and medical services. In general, the use of artificial intelligence in the field of medicine and medical services makes a great help for doctors and patients, as well as for hospitals that use this technology.

Artificial intelligence has numerous applications in medicine and treatment. The meaning of these countless users is that from recognizing the connection between genetic codes to using artificial intelligence robots for treatment and improving the quality of human life is treatment, health, and medical services. In addition, the inability to connect important data points causing the industry to lose hundreds of billions of dollars.

New AI innovations in the healthcare industry can undoubtedly be the healthcare industry's next frontier. The ability to analyze vast amounts of data and extract information from it means we can spend a lot of money on treatment and improve the patient experience. Therefore, the ability to provide patients with more information in a timely manner can also reduce the risk of medical errors and help correctly diagnose diseases.

At the same time, while artificial intelligence is just at the beginning of a renaissance of users in artificial intelligence in the field of medicine, all those attempts to use artificial intelligence to generate a new course in medicine and services it takes time.

Use artificial intelligence to more accurately diagnose disease

In 2015, 30% of deaths in the United States were due to “modifiable risk factors.” This means that the role of artificial intelligence in the field of medicine and medicine can be crucial in improving the quality of life and helping people live longer.

For the first time in almost two decades, one of the most important tasks of artificial intelligence in the field of medicine is to help doctors and other medical professionals treat patients more accurately on a daily basis.

In a study published in 2015, researchers analyzed the medical records of 4 million patients admitted to U.S. hospitals, each with a different disease and a different treatment that required them to be treated. The results of the study indicate that having access to real-time and comprehensive information about a patient's medical history can help improve treatment decisions.

New AI innovations in the healthcare industry can help doctors and other medical professionals treat patients more accurately on a daily basis. The ability to analyze vast amounts of data and extract information from it means we can spend a lot of money on treatment and improve the patient experience.

Collect and manage medical data and information using artificial intelligence

One of the next frontiers is the development of big data. It will undoubtedly be the healthcare industry. Valuable information is sometimes lost in the millions of data points, which can lead to low hundreds of billions of dollars. In addition, the inability to connect important data points shows the development of new drugs, the production of prophylactic drugs, and the proper detection process.

Many healthcare professionals have turned to artificial intelligence to use medical data and information to improve their work. For example, in 2015, researchers analyzed the medical records of 4 million patients admitted to U.S. hospitals, each with a different disease and a different treatment that required them to be treated. The results of the study indicate that having access to real-time and comprehensive information about a patient's medical history can help improve treatment decisions.

Collaborative robots can work together to improve treatment decisions. They can also help doctors and other medical professionals treat patients more accurately on a daily basis. New AI innovations in the healthcare industry can help doctors and other medical professionals treat patients more accurately on a daily basis. The ability to analyze vast amounts of data and extract information from it means we can spend a lot of money on treatment and improve the patient experience.

Get help from robots based on artificial intelligence

In recent years, the use of robots in surgery has become more widespread. However, these robots are primarily used for robotic surgeries, the patient’s recovery time is reduced. In addition, the robotic surgeries help guide the surgeon and the whole team.

Arian, an eight-year-old boy suffering from cancer, got to fulfill his wish of becoming a firefighter. Arian celebrated his birthday on Friday with Ahvaz children's fire department. He was appointed as a commander of operations for one day, IRNA news agency reported on Saturday.

A symbolic ceremony, a fire alarm was sounded and the young commander of the fire department uniform, was dispatched to the scene along with firefighters and eight fire engines.

Arian’s firefighting operations were well done and the little boy’s wish of becoming a firefighter finally came true thanks to Ahvaz fire department.

Ceramist Abbas Akbari honored as Iran’s top art scholar of the year

The ceremony was organized online last Tuesday by the Ministry of Science, Research and Technology as part of National Research Week, which was held in honor of the late Iranian mathematician Alireza Akbari. Akbari is a professor at the Department of Higher Art Studies at the University of Kashan. He is active in the fields of pottery and ceramics, and has been able to revive lustre pottery, which is a type of pottery or porcelain with a metallic glaze that gives the effect of iridescence.

This combination photo shows ceramist Abbas Akbari and some of his artworks. Pottery kilns’ based on my personal experience when I was a student and during the years when kilns were hard to find. Akbari has said, “My other activities also go back to my back to the Mogol era and was smothered while renovating a house in Kashan. I have created the tile by learning the process and my personal experience in a book that is an art form against the kilns discovered in Iran,” he explained.

He added that there are a great number of topics in his research work as in the country since art has numerous branches and it is not just related to unfixed issues, which need to be researched by the next generation.

The history of art used to be recorded by Western experts using their own methods, however, I believe that those methods are not applicable. We need to work in those areas that are in line with the current situation, such as those that are dictated for demolition and need to be studied through their methods and with their methods. New techniques have been developed and improved. We need to carry out these types of research,” he concluded.

According to Vezhaldin’s kronum, “With dis for the Ceramic Multiples 2016, held in Varandiz, the Republic of Croatia.

### Art centers team up for virtual festival to raise hopes for future

Sambok’s book of transformation of global news reporting published in Persian

The festival is born out of the desire to organize, the statement added. They also hope that the festival gives a chance for young artists to discover their hidden talents.

Cinéma Vérité honors veteran documentarian Kamran Shirdel

The honoring ceremony was organized on Monday. The 14th Cinéma Vérité, the organizers of the major Iranian documentary film festival announced on Monday.

The film was an entry to the Special Screenings category of the festival.

### “Coup 53” most popular doc at Cinéma Vérité

Amirani and editor Walter Murch find an extraordinary and never before seen footage portraying a down and dirty story about the Anglo-American coup in Iran in 1953. Documents and stills footage were used to create the film, detailed with explosive revelations about secrets hidden for 66 years. From a historical documentary about four days in August with explosive revelations about secrets hidden for 66 years.

The 14th edition of Cinéma Vérité, Iran’s major international documentary film festival, has unveiled its first phase. The festival has been a gateway for innovative Iranian documentary films and has been able to revive lustre pottery, which is a type of pottery or porcelain with a metallic glaze that gives the effect of iridescence.
