TEHRAN – A former Japanese diplomat says that he is filled with deep emotion when he reflects upon the events that led to the downfall of the U.S. and its allies. The diplomat, who is considered as a legend in Japanese diplomatic circles, said that the U.S. had turned a blind eye to the sanctions that were imposed on Iran.

**Millennia-old iron production sites discovered in Iran**

By MASOUD HOSSINIAN

TEHRAN – Archeologists have discovered several millennia-old iron production sites across a historic village in southwestern Iran. “Several iron production sites and kilns for melting iron ores have been discovered across Chaluk royal district in Khuram county of Yazd province,” said a local tourist official announced on Saturday.

The discoveries were made during a survey led by Iranian archaeologist Hossein Amini under the supervision of the Research Institute of Cultural Heritage and Tourism, the official said.

So far, 60 cultural and historical sites and sites, including buildings, castles, aqueducts, tombs, cemeteries, and hills, have been identified during the survey, the report said.

The oldest cultural elements and artifacts identified so far in this survey date to the late Middle Paleolithic, a period about 35,000 years ago, the official noted. Available in the accounts of the village’s elders, it was about 3.5 billion cubic meters per year per unit.

Mohammad Darvish, head of the environment group in the UNESCO Chair on Social Health told Mehr on Saturday that the situation of ground- water resources is worrisome, and if this negligence continues, more land subsidence will occur in the West Asian country has improved over the past years.

The factory’s emergency team immediately reported the fire and the Military Protection Forces were called to the site to gain control of the fire.

Israel and Saudi Arabia, though the Congress and media might have the wrong impression about the situation in the region, tell the Tehran Times.

The relationship between Riyadh and Washington was close throughout the Trump administration.

**IRGC intelligence service demolishes anti-Iran group**

**TEHRAN**—In its first major policy speech on Friday, U.S. Defense Secretary Lloyd Austin claimed that the U.S. military needs to be prepared for a potential conflict with Iran over details of a new U.S.-led coalition against global terrorism. Austin stressed the need for the U.S. military to move forward a faster and more intense way to deal with the technological advances and competition.

Speaking during a trip to the U.S. Pacific Command in Hawaii, Austin said, “In fighting the next major war is going to look very different from the way we fought the last ones. Galloping advances in technology mean that the USA, the United States across every domain across all five domains of influence - space, cyber, sea, land, air, and space and cyberpower.”

To combat these advances, Austin unveiled a new strategic framework and called for a more agile and flexible approach to dealing with the emerging threats.

**Pentagon Chief: next major war will be much different**

**Pentagon**—In a tweet, U.S. Defense Secretary Lloyd Austin said that the next major war will be much different than the wars of the past.

Austin stated that the next major war will be fought on multiple fronts, including cyber, space, and other domains.

He added that the U.S. military needs to be prepared for a potential conflict with Iran, which he described as a “key adversary”.

Speaking at a conference in Washington, D.C., Austin said, “The next major war will be fought in multiple domains, and we must be prepared for it.”

Austin’s comments come as tension between the U.S. and Iran continues to escalate, with both sides engaging in a series of言语 exchanges and military provocations.

According to the Pentagon, the U.S. military has been preparing for a potential conflict with Iran for months, with increased presence in the region and heightened readiness levels.

US officials have repeatedly warned that a military conflict with Iran could be catastrophic, potentially leading to a wider regional war.

Austin emphasized the importance of preparing for a potential conflict, saying that the U.S. military must be ready to respond quickly and effectively.

He added that the U.S. military must be able to operate in a contested environment, where it may not have the same level of dominance as in past wars.

Austin’s remarks come as the U.S. and its allies continue to work on a diplomatic solution to the Iran nuclear deal, with talks set to resume in Vienna on May 2.

Iranian politicians have repeatedly called for a military conflict with the U.S., with Supreme Leader Ayatollah Ali Khamenei saying that any such conflict would be met with “divine revenge.”

However, some experts have warned that a military conflict with Iran could have catastrophic consequences, potentially leading to a wider regional war and a global arms race.

Austin’s comments come as the U.S. and its allies continue to work on a diplomatic solution to the Iran nuclear deal, with talks set to resume in Vienna on May 2.
Iran, P4+1 group of countries hold talks in Vienna

TEHRAN — Nuclear negotiators from Iran and the P4+1 group of countries held talks in Vienna on full restoration of the nuclear deal.

According to Russian Foreign Ministry Spokeswoman Maria Zakharova, Iran and the P4+1 group of countries held the third round of talks on full restoration of the nuclear deal (without Iran who is still not ready to come to the table).

The Round of 16 (West) Round of 16 cast was finalized following the conclusion of the Group Stage on Friday.

As Group A and C brought the thrilling Playoff group stage to a close, Round of 16 draws 16 of best eight teams of the continent’s biggest clubs sides missing out.

Iran turns to blackmail as JCPOA Talks make progress

There are constant tensions between Iran and the U.S. on one hand and all the talks between Iran and the P4+1 group of countries on the other hand.

The international talks that started in April to reach an agreement on the full restoration of the nuclear deal, which has been suspended since 2018, have entered a new stage.

The objective of the Vienna talks is to reach an agreement on the full restoration of the nuclear deal that was signed in 2015.

The talks are aimed at restoring the full implementation of the Joint Comprehensive Plan of Action (JCPOA), which includes lifting sanctions against Iran.

The talks will be held in four rounds, the last of which is scheduled for June 20.

The U.S. administration has been pressing for Iran to return to full compliance with the nuclear deal, while Iran is demanding the lifting of all sanctions.

The U.S. has been using various pressures, including sanctions, to force Iran to return to the nuclear deal.

The talks will be held in Vienna, with each round lasting three days.

The first round of talks was held from April 15 to 17, with a second round scheduled for the end of April.

The third round of talks was held from May 17 to 19, with the final round set for June 20.

The next step in the talks will be held in June, with the talks set to continue until the end of the year.

Iran continues to raise oil output in April: survey

The Reuters survey aims to track supply and demand and is based on shipping data provided by external sources, refineries and shipping companies. It also checks with shipping agents, tankers operators and crude oil experts to anticipate future trends.

According to the survey, crude oil output from Iran has risen every month since June 2020 with the exception of February, when a power outage impacted its oil production. Over the past few months, the project has been increasing its crude output, and this is expected to continue in the near future.

The Reuters survey also notes that Iran continues to import oil products, which has helped to keep its oil production in check.

ECONOMY

Iran, plus fellow OPEC members (including Iran, the UAE, Iraq, Algeria and Venezuela), has reduced its spending on oil and gas production in recent months due to lower global oil prices and the ongoing coronavirus pandemic.

Iran has also been focused on improving its domestic economy, with a focus on infrastructure development and the implementation of the new OPEC+ agreement, which was reached in April 2020.

According to the survey, Iran's crude oil output is expected to continue to rise in the coming months, with a focus on maintaining its compliance with the OPEC+ agreement.

Monthly exports from Markazi province tripled yr/yr

ECONOMY

TEHRAN – The value of exports from the Markazi province tripled in the first month of the current Iranian calendar year (March 21-April 20) compared to the same period in the previous year.

According to Mir-Ashrafi, Iran's non-oil export was 112 billion dollars in 2020, while its oil export was 37 billion dollars. This year, the country's non-oil export is expected to reach 140 billion dollars.

The country's trade balance was $174 million positive in the first quarter of 2020, according to the survey. China, Iraq, the United Arab Emirates (UAE), Turkey, and Afghanistan were Iran's main trade partners in the first quarter of 2020.

According to the survey, Iran also imported 2.041 million tons of goods worth $2.794 billion in the said month, which with an increase of 47 percent in terms of volume and value were Iran's top import sources in the mentioned month.

The value of Iran's oil trade shrank by 17 percent, while its trade with China increased by 13 percent, and its trade with the UAE decreased by 10 percent.

Iran-China agreement undermines US: Saudi expert

Mohammad Ali Saki

TEHRAN – Ali Yahia, a Lebanese consultant in international relations, says that the Iran-China agreement undercut President Biden’s efforts to ordi-
nance the US withdrawal of its troops from Afghanistan. According to Yahia, the Iran-China framework agreement undermines the US leverage against Iran: "I believe it is a strategic vacuum that will be filled by the incremental efforts that have served for years to undermine
America’s influence in the region. The Taliban, which built its support base even before the Americans withdrew from the region, is more than ready to fill this leadership void. China, will, of course, try to maintain its influence in the region and will use its influence on theあり
that otherwise slumbered with the US withdrawal.

Although some like the possibility of the Taliban’s control of Kabul is a military daunting, this is unlikely due to the presence of the US and forces, which will also be there even after the US withdrawal. In addition, the former Northern Alliance. Further, there is no guarantee that the US withdrawal will end the "war that was over decades" that resulted in the defeat of the US forces. The US withdrawal will not lead to a strategic balance, a sustainable, comprehensive and lasting peace.

However, the US military will not simply leave the region. Instead, it will plant its troops and relocate them to East Asia to contin-
tinue to monitor Afghanistan and form its biggest strategic challenge. China. The United States will also maintain its commitment to standing by its existing commit-
ments in political, security, and economic matters.

The Iran-China agreement undermines US: Saudi expert says

By Richard Sudan

It seems as if everything Boris Johnson touches turns to dust. His party is on the verge of electoral defeat, his leadership is in a storm of his own making and he is on the verge of being completely surrounded. Boris Johnson is now in the hands of the enemy of "Tory" and "Brexit". Boris Johnson is, in fact, in the grips of a pandemic that threatened and still endangers the lives of millions around the world. Boris Johnson himself contracted COVID-19, and his government’s response to the pandemic has been widely criticized for being too slow, too ineffective and too focused on the economy.

But Boris Johnson’s leadership as prime minister does have some positive aspects. Boris Johnson is a strong leader, who is not afraid to make difficult decisions, even if they are unpopular. He has been able to maintain his public image and is still a popular figure in the UK.

However, Boris Johnson’s leadership has also been marked by failures. Boris Johnson’s handling of the pandemic has been widely criticized for being too slow, too ineffective and too focused on the economy. Boris Johnson has also been criticized for his handling of Brexit negotiations, which have resulted in a deal that is not acceptable to many Britons. Boris Johnson’s government has also been criticized for its handling of the economy, which has been sluggish and lacks growth.

Despite these failures, Boris Johnson is still a popular figure in the UK. He has a strong personal brand and is able to connect with the public on a personal level. Boris Johnson is also able to mobilize his party and his base of supporters, even when he is facing criticism from the opposition and the media.

In the end, Boris Johnson’s leadership as prime minister has been a mixed bag. He has been able to maintain his public image and is still a popular figure in the UK. However, Boris Johnson’s handling of the pandemic has been widely criticized for being too slow, too ineffective and too focused on the economy. Boris Johnson has also been criticized for his handling of Brexit negotiations, which have resulted in a deal that is not acceptable to many Britons. Boris Johnson’s government has also been criticized for its handling of the economy, which has been sluggish and lacks growth.

Boris Johnson’s premiership fails, ordinary people pay the price

The US withdrawal of its troops from Afghanistan is the result of an agreement between the US and the Taliban. This agreement is not in the best interest of the American people, and it is a direct result of the president’s failure to prioritize the well-being of the American people.

President Biden failed to prioritize the well-being of the American people when he decided to withdraw troops from Afghanistan. This decision led to the American people being left to fend for themselves against a brutal regime, and it is a direct result of the president’s failure to prioritize the well-being of the American people.

The American people are now paying the price for the president’s failure to prioritize the well-being of the American people. The American people are now paying the price for the president’s failure to prioritize the well-being of the American people.

The American people are now paying the price for the president’s failure to prioritize the well-being of the American people. The American people are now paying the price for the president’s failure to prioritize the well-being of the American people.

Resist抟

Hamas calls for confronting Israel’s plots against Palestinians

Hamas spokesman suggests the US withdrawal could lead to a "new era" of alliances among Israel and its allies, "exacerbating the situation for the Palestinians."

IAA” the Hamas Movement has expressed its responsibility in the ability of the Palestinian people and the resistance forces that target them and their city.

In a statement, the Hamas Movement confirmed that the Palestinian people from all spectrums have a national duty to confront Israel’s humiliation and oppression, and to resist the total corruption of the Palestinian government and its policies.

The Hamas Movement emphasized that the Palestinian people have the right to resist against all Israeli aggressions and violations, and to respond to the crimes of the occupation and settlers’ actions, whether within the territories of Israel or the occupied West Bank and Gaza Strip.

Women inventor rate in Iran higher than global average

The participation of Iranian women in research and development fields is registered by women is equivalent to 40 percent of the total patents registered in the database, he further explained. While the share of the female population in higher education was only 28 percent per 100,000 populations in 1978, now, it reached 4.74 percent which is 2 percent above the male inventor rate. The data are consistent with the great female enrollment rate (total number of female students enrolled in universities and higher education institutions) of 41.2 percent in 2015 which is 2.7 percent in 1978 to 4.12 percent (20 times) this year, Gholami noted.

The participation of women were mostly female members working in higher education institutions, which reached up to 30 percent, he further concluded.

The increase in the share of women in research and development is mainly due to their increasing share in knowledge-based companies, Mohammad Ebrahimi, the vice president for women's and family affairs, said in August 2020.

Brazilian Amazon released more carbon than it absorbed over past 10 years

The Brazilian Amazon released nearly 20 percent more carbon dioxide into the atmosphere over the past decade than it absorbed, according to a study released on Tuesday. The amount of carbon released has no longer depend on the world’s largest tropical rainforests to absorb it. The result, which was published in Environmental Science: Processes & Impacts, is a significant blow to the international community’s efforts to fight climate change, which is largely driven by human activities such as deforestation and fossil fuel burning.

The study, which was conducted by a team of researchers from the University of Kentucky and the University of California, Davis, found that over the past decade, the Amazon basin released 918 million metric tons of carbon dioxide into the atmosphere, while absorbing 771 million metric tons. This is a significant increase from the previous decade, when the Amazon released 732 million metric tons of carbon dioxide into the atmosphere, while absorbing 825 million metric tons.

The study also found that deforestation and forest degradation, which are the main sources of carbon emissions in the Amazon, have increased significantly over the past decade. In 2019, for example, the Amazon released 91 million metric tons of carbon dioxide into the atmosphere, while absorbing 81 million metric tons. This is a significant increase from 2010, when the Amazon released 75 million metric tons of carbon dioxide into the atmosphere, while absorbing 90 million metric tons.

The study’s findings are significant because the Amazon is one of the world’s largest carbon sinks, absorbing carbon dioxide from the atmosphere and storing it in its trees and soils. This carbon is then released back into the atmosphere through processes such as deforestation and forest degradation.

The study’s findings also highlight the importance of protecting the Amazon and other carbon sinks from further damage, as these ecosystems play a crucial role in the global carbon cycle and are vital for regulating the Earth’s climate.

The study’s authors also called for increased efforts to reduce deforestation and forest degradation, and to develop and implement effective policies and strategies to protect the Amazon and other carbon sinks from further damage. They also called for increased investments in research and development to better understand the factors that are driving deforestation and forest degradation, and to develop and implement effective policies and strategies to protect the Amazon and other carbon sinks from further damage.

They also called for increased investments in research and development to better understand the factors that are driving deforestation and forest degradation, and to develop and implement effective policies and strategies to protect the Amazon and other carbon sinks from further damage.
