Stating that such efforts and raising such issues are not strategic, he said that Zinot’s regime’s lobby in the United States was a result of the U.S. political strategy in the United Arab Emirates (UAE) in the region, and that “Israel’s enemies have the resources of the game have changed in favor of Israel.”

Baroud emphasized that regardless of the possibility of Israeli response, it seems that the “rules of the game have changed” as the attack shattered Israel’s fantasy of exposing Tehran to the world and its neighbors.

In a statement on Friday, Zodiac Maritime, the Israeli-owned owner of the oil tanker, said that the fire on the Liberian-flagged, Japanese-owned ship Mercer Street was caused by an apparent drone strike and the UK had been informed that the ship was attacked in an act of piracy.

The incident is decades old.

Ebrahim Raisi, the current president of Iran, said on Saturday that Iran will be the first to arrive at the UAE and will establish a positive relationship between the two countries with the help of the UAE and Iranian armed forces.

The recent retaliatory attack on an Israeli-managed oil tanker off the coast of the United Arab Emirates (UAE) comes in response to an Israeli missile attack on Syria and that the Ministry of Foreign Affairs and Foreign Trade of Iran had been working on the issue and had taken legal and judicial follow-up, and that the Israeli vessel had been en route to the port of Fujairah.

The套路 to the coast of the UAE is also a result of a professional performance which he described as “our own country and maintain the security of the region.”

The diplomat also responded to another question about “Iran’s moves” in the region in response to the withdrawal of the United States from the Iran nuclear agreement (JCPOA) and the recent targeted assassination of Iran’s nuclear scientist Mohsen Fakhrizadeh.

It is Iran’s top priority to support the peaceful development of the region.

He emphasized that all these measures are obstacles that the U.S. government and people of this country to be able to reach an agreement with the United States in due time.

Addressing U.S. officials, Khatibzadeh highlighted that the general and the extreme caution you have towards the Iranian people and a delegation from Saudi Arabia in the region.

Iran vehemently rejects Bahraini claims, says judicial process is flawed

The spokesman referred to the recent trials of one or two members of this council, and the United States in the region will be held accountable for its actions.

He emphasized that all these measures are obstacles that the U.S. government and people of this country to be able to reach an agreement with the United States in due time.

In a statement on Saturday after the recent remarks about Iran during a visit to Bahrain, Saeed Khatibzadeh strongly condemned the announcement by the Bahraini Court that several Iranian nationals had been sentenced to various terms of imprisonment as well as financial penalties.

The United Nations has repeatedly called for the release and return of Iranians from American detentions and a delegation from Saudi Arabia in the region.

The senior diplomat warned one or two members of this council and the United States in the region.

He emphasized that all these measures are obstacles that the U.S. government and people of this country to be able to reach an agreement with the United States in due time.

Iran is to publish a book on U.S.-Based JCPOA with Zarif

**TEHRAN** – Iran’s Foreign Ministry spokesman Arman Fakhrizadeh said on Tuesday that the recent letter he sent to the U.N. secretary-general about the Joint Comprehensive Plan of Action (JCPOA) was not the last one.

"The plan is to publish a book on the U.S.-Based JCPOA with Zarif in the near future," Fakhrizadeh said. "We are still working on the book and will publish it soon.

"We are in the final stages of the book and will publish it soon," he said.

Fakhrizadeh also said that the letter he sent to the U.N. secretary-general was not the last one.

"The letter was sent to the U.N. secretary-general and it was our last letter," Fakhrizadeh said. "We are still working on the letter and will publish it soon.

Fakhrizadeh also said that the letter was sent to the U.N. secretary-general and it was our last letter.

Israel fails to fish in troubled waters

**TEHRAN** – While Iran’s Foreign Ministry rejected allegations of involvement in a mysterious attack on an Israeli-owned oil tanker in the coast of Oman, Israeli officials seek to fish in the troubled waters of the region by creating a united front against Iran.

The mysterious attack, which took place on Thursday, resulted in the destruction of the oil tanker and sent shock waves across the region. Israel was quick to point fingers at Iran, accusing the Islamic Republic of being behind the attack.

However, the Iranian government denied any involvement in the attack and condemned the accusations as baseless.

"Israelis are in a tailspin over the attack on their ship," a senior Iranian official said.

"We will respond to it," the official added.

"It is unfortunate for Israel to base their conclusions on the incident aboard the M/T Mercer Street oil tanker in the Syrian city of al-Qusayr which killed two European nationals on board the Israeli-owned ship," an Israeli official said.

"We will respond to it," the official added.

The Israeli-owned ship Mercer Street carrying cargo from the UAE to Israel was targeted in the attack.

China's economic rise presents an alternative to Western model: researcher

By Tom Secker

China's rise to economic prominence has seen the country emerge as a global superpower, challenging the traditional Western economic model. This rise has been accompanied by a surge in infrastructure development, energy production, and industrial output, underpinned by a strong commitment to state-led investment and innovation.

China has made significant investments in connectivity networks, infrastructure, and energy projects. For instance, its Belt and Road Initiative (BRI) has been instrumental in facilitating the development of trade and investment corridors between China and other countries, particularly those along the Maritime and Continental corridors.

The BRI initiative is giving the opportunities to host both man-made and natural resources which will also lift the economies of the partner countries. China's vision for the common good of humanity is well known. China has been investing in renewable energy projects, aiming to reduce its carbon footprint and contribute to global efforts to combat climate change.

The Chinese development path and governance presents a contrast to the Western model. China's foreign trade volume increased to $4.65 trillion in 2020 from $3.84 trillion. On the other hand, despite the pandemic, China's economy has continued to grow, with GDP growth averaging nearly 10 percent over the span of the past few years. China won the title of the second-largest economy in the world in 2014, and its advantage. China learned from the best practices of other countries and knew how to convert challenges to opportunities.

Excavation sheds new light on ancient cemetery in northern Iran

However, the site was partly looted by antiquities seekers during a two-year gap in archaeological research.

Amlash, now a county in Gilan province, was originally located in northeastern Gilan in 1250 BC. The name originates from the nearby Amlash tribe who were first discovered during excavations. The site spans the millennium BC through the Partho-Sasanian period, but most of the objects are dated to the 8th-6th BC. Dating and meaning of the known objects (Roman weapons and animal figurines, human statues of terra cotta and bronze, pottery animal-ovy glass vases, and bronze figurines), as well as rock-cut chamber structures, have been completed by sophisticated archaeological research.

The site embraces an Iron Age for sites of the early historical period, including many late prehistoric finds and rock-cut chamber structures. Among the finds are stone tools, bone utensils, and terracotta animal figurines. Some of the objects bear inscriptions, and rock-cut chamber structures have been discovered. The site is noteworthy for the discovery of ancient tombs and rock-cut structures. It is located near the modern city of Amlash, which is now a county in Gilan province, and is situated in the northern shores of the Amlash Sea in the north of Iran.

"The Persian Gulf, an Archaeological Perspective" comes to bookstores

The project to explore the role and importance of genetic research in the Persian Gulf has been completed. More than 3,000 ancient petroglyphs and rock-carved arts have been discovered in the area since the Sassanid period. These petroglyphs are located in various parts of the Persian Gulf, from the coast to the interior. The site embraces an Iron Age for sites of the early historical period, including many late prehistoric finds and rock-cut chamber structures. Among the finds are stone tools, bone utensils, and terracotta animal figurines. Some of the objects bear inscriptions, and rock-cut chamber structures have been discovered. The site is noteworthy for the discovery of ancient tombs and rock-cut structures. It is located near the modern city of Amlash, which is now a county in Gilan province, and is situated in the northern shores of the Amlash Sea in the north of Iran.

Roofing covers almost 'over city of the mouthless'

The building is one of the earliest settlements in the country, which is situated near Persepolis village of Mazandaran province. The site embraces an Iron Age for sites of the early historical period, including many late prehistoric finds and rock-cut chamber structures. Among the finds are stone tools, bone utensils, and terracotta animal figurines. Some of the objects bear inscriptions, and rock-cut chamber structures have been discovered. The site is noteworthy for the discovery of ancient tombs and rock-cut structures. It is located near the modern city of Amlash, which is now a county in Gilan province, and is situated in the northern shores of the Amlash Sea in the north of Iran.

Iranian police seize ancient relics from smugglers

The antiquity of Qom goes back to the Sassanid era. Apart from sightseers and pilgrims who visit Qom for its holy sites, the city is also a destination for art and music lovers. It is home to several mausoleums, including the house of Ali, the father of the Prophet of Islam. The site embraces an Iron Age for sites of the early historical period, including many late prehistoric finds and rock-cut chamber structures. Among the finds are stone tools, bone utensils, and terracotta animal figurines. Some of the objects bear inscriptions, and rock-cut chamber structures have been discovered. The site is noteworthy for the discovery of ancient tombs and rock-cut structures. More 200,000 doses of COVIRAN vaccine delivered

COVIRAN BAREKAT was unveiled on December 29, 2020, and received the license for public use on June 14. It proved effective against Indian strain.

Currently, one million doses of the vaccine are produced in line one every week, and with the launch of lines two and three by early September, this capacity will increase two to three folds, he explained.

Homegrown COVIRAN vaccine

Made by researchers at the Headquarters for Executing the Order of the Imam, COVIRAN BAREKAT was unveiled on December 29, 2020, and received the license for public use on June 14. It proved effective against Indian strain, according to Hujjat Nili-Macki, head of the information center of the headquarters for Executing the Order of the Imam.

Eleven countries from Asia and South America, and a European country have asked for importing COVIRAN vaccine, Hassan Jalili, the vaccine’s production manager, has said in Fars.

Mass vaccination against COVID-19 started on its main rilines with the Russian-made Sputnik V vaccine on February 9.

While Iran continues efforts to mass-pro-duce local candidates, 13 million doses of foreign vaccines have already been imported and others are expected soon. Iran is also producing vaccines jointly with two countries, Russia, and Australia, which may also be released by September.

According to the Food and Drug Adminis-tration, 14 vaccines are being domestically produced in the country, which are in a different study phases.

Charity event frees 260 inmates of unintentional crimes

Charity event frees 260 inmates of unintentional crimes

TEHRAN – Another national campaign for the release of prisoners of unintentional crimes with financial conditions was launched on Wednesday.

The campaign, called Eid al-Adha to Eid al-Ghadir, has been held from July 23 to 29.

Charities from Afghan, Mazar-e-Sharif, and Aazarani provinces have each contributed the most amount of money in this event to be used for the release of involuntary prisoners.

A total amount of 3.935 billion rials (nearly $107 million) at the rate of 42,000 rials (nearly $0.10) is budgeted for the payment of debts of the inmates.

The 260-named freed nationwide Iranian benefactors helped release a total of 6,938 prisoners of unintentional crimes across the country over the past Iranian calendar year, 1390, according to the Blood Money Organization.

Freedom of involuntary crimes is done in three ways: the first way is granting prisoners leave and the second way is providing a number of them with loans to be paid back inside the prison.

The third way of assistance is the release of prisoners who have paid off their loans and debt; last year, a total of 35 trillion rials (nearly $950 million) has been donated by benefactors with coverage of the inmates.

Last year, heads of the three branches of the government and the private sector donated 3.5 billion rials (nearly $95 million) to release inmates who had committed involuntary crimes.

President Hassan Roshani, former Par-liguent Speaker Ali Larijani, and former Judiciary Chief Ebrahim Raisi made a total of 2.3 billion rials (nearly $62 million) to contributions in freeing of prisoners of unintentional crimes.

Rare Diseases Document Goes into Effect

The main vision of this document is to prevent the birth of infants with rare diseases and to solve the medical and therapeutic problems of rare patients in the country.

After the approval of the Document, all related bodies will be obliged to take all necessary actions in this regard and the programs will be monitored nationally.

Yass Le Cam, the chief executive officer of the European Organization for Rare Diseases (EURORDIS), has praised Iran for preparing a national document on rare diseases, saying that it will change the lives of one million rare disease patients in the country.

Rare diseases prevalence

According to the statistics published in 2009, the number of rare diseases identified in Iran has reached 373 types of diseases and about 4,250 patients are covered by the Rare Diseases Foundation of Iran.

Out of a thousand population, 2 people got a rare disease, while the prevalence can be removed by changing people’s culture, screening, identify- ing patients, and increasing awareness.

According to WHO, rare diseases are often serious, chronic, and life-threatening. The European Union (EU) definition of a rare disease is one that affects fewer than 5 in 10,000 people. At the same time, 3.5 million patients are known; around 80 percent of them remain in the dark of the financial and half of them occur during childhood.

According to these data, 6–8 percent (or about 30 million people) of the world’s population suffer from rare diseases. This is why the US has 6.8 percent of 358 million adults in the 20 to 70 year age group.

Rare diseases are often associated with a high psychological burden for the people and their families because they also have a major impact on a patient’s family. In addition to the health burden on patients, low of these diseases have effective drug treatment available.

The separation between ownership and land use is a basic obstacle for the development of rural Iran. Moreover, there is no doubt that the land reforms from 1962 onwards have been associated with extensive problems in the form of rural property; but a survey by the Iranian Ministry of Agriculture for four provinces from Planck 1967 may serve to show the general trend.

The separation between ownership and land use is a basic obstacle for the development of rural Iran. Moreover, there is no doubt that the land reforms from 1962 onwards have been associated with extensive problems in the form of rural property; but a survey by the Iranian Ministry of Agriculture for four provinces from Planck 1967 may serve to show the general trend.
**Iranian mythology Jalal Sattari: Sabit 90**

**CULTURE**

Iranian mythology scholar Jalal Sattari, whose studies must centered on recertifying the impact of Achaemenid art, died following a massive stroke at his home in Tehran on Saturday. He was 90.

Sattari was a renowned scholar of Achaemenid art and was recognized for his contributions to the field. His work has been influential in the study of Achaemenid culture, particularly in the areas of rock relief art and palace architecture.

Sattari was born in 1929 in Tehran, Iran, and received his education at the University of Tehran. He later went on to become a professor at the university and a leading figure in the field of Achaemenid art.

Sattari’s research focused on the study of rock relief art, particularly in the regions of Fars and Khuzestan. He was instrumental in the discovery of many important rock relief sites, including those at Kazerun and Chogha Zanbil.

Sattari’s work has been widely recognized, both nationally and internationally. He was a member of the Iranian Academy of Sciences and the International Association for the Study of Achaemenid Art (IASCA).

Sattari’s death is a significant loss for the field of Achaemenid art, and his legacy will continue to influence the study of this important period in Persian history.
